Professional Experience

Project Manager / IT Manager / Online Projects Manager

Laboratoires Bug-Tracker Inc., Montreal, Québec

11/2005 – 11/2009

As Project Manager I was responsible for numerous video game console and PC quality assurance projects. Highlights include managing a team of 14 testers, testing a gaming platform that supported online multiplayer interaction and real money transactions. This project covered five product releases over a period of one year on multiple platforms (Windows desktop client and browser based). I was responsible for developing test plans and test cases, scheduling and training new resources locally and in Asia, with the aide of teleconferencing software.

As IT Manager I was responsible for the oversight of the IT team as well as the development and implementation of information management and security policies. I evaluated the technical needs of the organization and implemented the necessary solutions to meet those needs. My duties also included network and applications support, code maintenance of existing software systems and development of new tools and applications.

In my role as Online Projects Manager I contributed to several web development projects for Bug-Tracker and its clients. I developed a company website using HTML and Javascript to replace an aging site based in Flash. This allowed us to support of a wider range of browsers and mobile devices while improving the browsing experience for site visitors and making localization and integration of updated content more manageable.

Laboratory Technician / Aliments Carrière, St-Martine, Québec

6/2003 – 10/2005

I added features to existing MS Access Database applications and developed new applications which directly resulted in increased efficiency and reduced paper usage in the quality assurance department.

Instructor / Niagara County Community College, Sanborn, NY USA

8/2002 – 12/2002

Courses taught:

Programming Logic II: In this course I covered concepts C++; file access, classes and user defined data-types, arrays, searching and sorting algorithms, pointers, and Object Oriented Programming.

Introduction to Personal Computers: This course covered Windows 2000, Microsoft Word, Excel and PowerPoint.
